## Instructions for deleting a single meeting record via the Builder Prime API

The app should submit a DELETE request to:

```
https://<builder-prime-subdomain>.builderprime.com/api/meetings/v1/<meetingId>
```

Replace `<builder-prime-subdomain>` with the specific subdomain specified by the customer.

The internal `meetingId` field must be specified in the request path in order to delete the record.

The request must include the secret key created in the Builder Prime app with meetings.delete scope as the value for a header key of `x-api-key`.

```
{
  "success": true,
}
```

A sample response for a failed operation from the API will be a format such as:

```
{
  "success": false,
  "errors": [
      {
        "code": "API_UNAUTHORIZED",
        "message": "Unauthorized request.",
      }
    ]
}
```
